EXPERIENCE

SDE-3 @ WHITE MARTECH SOLUTIONS (engage.kgen.io)

Sep 2023 – Current

- Built **Lazy Chain**, a multi-chain abstraction layer delivering Web2-like UX for in-game currency, processing **1M+ transactions/day** across **5 blockchains**.
- Developed an authentication middleware validating third-party game requests across **7 integrated titles** — including **Ludo, Zapak, Carrom, Hindustan Times, and Times Now** — at the same scale.
- Built an on-chain inscription service that records in-game currency events as log inscriptions instead of ERC-20 transactions, cutting per-event gas cost by **~60%** (~25K vs ~65K gas) with real-time gas-price optimization across multichain routing.
- Hardened the platform for production scale with **Redis distributed locks** on balance mutations, balance-query optimizations, error categorization, and a **DynamoDB-backed negative-balance detection pipeline** — instrumented with Sentry and Slack observability.
- Engineered the **custodial wallet & identity layer** integrating **AWS Cognito** with **Web3Auth** — social logins (Google, Discord), encrypted private-key management, and custodian wallets across **EVM and Aptos** chains.
- Integrated a **Shield anti-fraud system** (webhooks, shieldld-based account blocking, session updates) with real-time Slack alerting to flag and block malicious users.

SOFTWARE ENGINEER @ BYJU'S

Dec 2021 – Sep 2023

- Designed a microservice generating monthly & annual progress reports from users' in-app activity and achievements.
- Integrated MoEngage, CleverTap, Zendesk, and AppsFlyer for unified data sync across the engagement and support stack.
- Built an **AWS SNS** notification system alerting relevant teams on user activity in real time, enabling swift cross-department action.
- Resolved production issues across North America and India regions with the support team, ensuring smooth operations and high customer satisfaction.

SOFTWARE ENGINEER @ MAGIC CRATE

May 2019 – Dec 2021

- Built an inventory forecasting system that cut unnecessary inventory spend by **30%**.
- Developed REST APIs syncing lead data between the e-commerce site and CRM, enabling the support team to resolve customer issues faster.
- Created a responsive, cross-device quiz platform for children to answer activity-specific questions.
- Designed a lead-distribution algorithm allocating leads across **50+ BDAs** monthly by lead score and individual conversion history.

INTERNSHIP @ MAGIC CRATE

May 2018 – May 2019

- Developed a CRM application in Laravel with a 3-person team, shipping to production in 4 months.
- Built a webhook system triggering Firebase to invoke an in-app call recorder; recordings stored in **AWS S3** and surfaced to BDAs in the CRM for sales analysis.

EDUCATION

KCE COIMBATORE

B.E. COMPUTER SCIENCE AND ENGINEERING

2015 – 2019

TECHNOLOGY

- **Languages:** Go, TypeScript, Node.js, SQL, NoSQL
- **Backend:** FastAPI, RoR, Laravel, Redis, DynamoDB
- **Blockchain:** EVM/Polygon, Aptos/Move, Web3.js
- **Frontend:** ReactJS, HTML/CSS, jQuery
- **Cloud/DevOps:** AWS, GCP, Docker, Sentry, Linux, Git/GitHub
